Synopsis:

We are all inundated with a seemingly endless supply of pocket philosophies. Just look in the self-help section of your local bookshop. It is not difficult to find out how most people feel about money, success, failure, the government, religion, what is best for our children and the like. Just ask the right questions and the response will be forthcoming. One of the most interesting questions, working with people on their business and personal strategies, is whether there are any panaceas, templates or formulae that, if followed like a recipe, will guarantee success. Of course the first issue is to define what is meant by success. We all have different views and I believe our priorities alter over time and through experience. That said, what I have learned is that we can significantly improve our chances of success in life with an understanding and adoption of certain key values and attitudes. The astounding fact is that very few people are ever taught how to incorporate such things into their everyday lives. That is what this workshop is about.
